

Care & Information

**Please Read Before Use*

Handling & Operation

- **Do not shake your Barava Light.** Shaking will cause the Ooze to break apart and cloud the globe.
 - If the unit is disturbed, **shut it down completely** and allow it to **fully cool and settle** before restarting.
- The Barava lights connections are rated at 5–6 Times the weight of the Barava Light. Do not apply unnecessary or excessive force to it as you would any decorative hanging light fixture.
- Inside the globe are **two heating springs** that are centered during assembly. These should remain centered for proper function. If they shift, you may **gently tip and tap** the light to re-center them.
- **Heat caution:** The Barava light is specifically designed to operate at a lower temperature than the traditional liquid lamps. Avoid continual skin contact with the glass globe during operation. The globe and base may become warm during extended use—allow time to cool before handling.
- **Child & pet safety:** Keep out of reach of children and pets to avoid tipping, or damage. Barava Ooze is wax, soap, SLES and distilled water. Never ingest the Ooze contents or water from a Barava light!

Power & Electrical Safety

- **Only use the included 24V power supply.**
- **Never wire or connect directly to a 110V/120V outlet without the included power supply**—this will permanently damage the electronics and **void the limited warranty.**

Placement & Environment

- **Indoor use only.**
- The Barava Light is **not waterproof**—do not use outdoors or in wet areas such as bathrooms, near pools, saunas, or hot tubs.
- Exposure to water or excessive moisture will damage the electronics and **void the limited warranty.**
- The device will not heat until it is above 55°F, keep your device(s) in a standard **room temperature environment.**

Cleaning & Maintenance

- **Do not spray cleaner directly** onto the light fixture. Liquids may run down into the globe or base, damaging internal electronics.
- Use a **microfiber or soft cotton cloth** with a small amount of cleaner applied directly to the cloth.
 - A **non-ammonia-based cleaner** is recommended.
 - Avoid harsh cleaners, which can damage or fade the powder-coated finish.
 - We recommend that you keep your Barava packaging for moving or temporary storage.

Adjustment & Installation

- **Do not spin or rotate the base/bezel around the glass globe.** This can damage the wires and internal connections.
- For guidance on adjusting the loom wire or altering the height of the main power wire on the table **stand version**, please visit: www.baravalight.com/get-started
